

# TRILLIUM STEEL DOORS LIMITED

## CUSTOM AND STANDARD SECTIONS

**Trillium Steel Doors** can fabricate 16 gauge frames and "stick" components with "sloped" sections. We can produce angles as small as thirty-five degrees. Typically sloping soffits are required in clean rooms, laboratories, hospitals, clean rooms in chemical plants and pharmaceutical manufacturers.

## CUSTOM AND STANDARD FRAMES

**Trillium Steel Doors** can fabricate 16 gauge frames and "stick" components in overall lengths of up to 14' 0" without splicing. This will allow us to make a frame in rebate widths up to 13' 8" and heights up to 13' 10" without splicing. These longer lengths may be more practical for use in multi-opening frames, transom frames, and sidelite open and closed sections.
